

The PowerDisc™ is a simple device that can stretch light bulb life over 10 years (based on normal household usage), and up to 8+ years (based on 24/7 usage) for standard light bulbs**, all while using 42% less energy.

PowerDisc™ installation instructions

1. Disconnect power during lamp (light bulb) replacement in case of loss of the device inside the lamp socket.
2. Remove the adhesive backing from the large foam piece and affix to the bottom center of the light bulb so it lines up with the bulbs' contact point.
3. Screw the bulb into the socket.
4. As it is well known in the industry, all energy efficient bulbs will have some reduction in lumens (light output), initially up to 30%. This also occurs with the PowerDisc™ lamp- life extender in place. If it is necessary to maintain similar lumen levels it is recommended to increase the wattage of the bulb used. The lumen level of the bulb is dependent upon the manufacturer, clear or frosted and type of bulb being used.
5. For maximum benefits and warranty protection, a brand new light bulb must be used.

Maximum bulb rating: 350w, 120v.

Caution: Use only with only medium based candelabra, halogen and incandescent light bulbs.

Insulating Ring Installation:

This Insulating Ring is provided to prevent shock by contact with the metal lamp screw base. Place the Insulating Ring on the top threaded portion of the bulb (making a seal between the bulb and socket) to reduce moisture exposure and further extend bulb life.

** The actual extended life of the bulb is dependent on the original life rating of the bulb. Ex. 1000 hours is now 100,000 hours

The maximum lamp wattage marked on the luminaire should never be exceeded as failure of the diode in combination with overlampping could cause a fire hazard. Always use caution when installing the PowerDisc™. Be sure the power to the device you are installing in is turned off, and never insert the PowerDisc™ in the socket directly. If you are unsure about installation, please consult an electrician. Not following these directions can cause serious injury or death.
